

Easy Clean Chemically-Free Home The Elite GREEN Home!

What is an Elite GREEN Home?

Elite GREEN Home is a residence that always looks better than new, is easy to maintain using environmentally responsible products. It is a home that has its architectural surfaces such as glass, stone, metal, porcelain, tile, and fiberglass and wood surfaces treated with the Diamond Seal Systems product line. Diamond Seal Systems products keep surfaces new, shiny and healthy by repelling water, dust, and environmental contaminants that cause corrosion, oxidation, and staining, improving indoor air quality. In all cases, maintenance is reduced by 70% and use of harmful chemicals is avoided altogether. Diamond Seal Systems products now come with Micron antimicrobial for long lasting germ, virus and bacteria elimination. Micron comes in all the Diamond Seal sealers and will continue to perform long after the original application. "A healthy home is a healthy family."

Elite GREEN Homes Shine Throughout!

Diamond Seal creates a covalent bond to the surface of glass and granite substrates providing a diamond-like coating that reduces scratching and repels water, dust and oil. Glass and granite will stay cleaner and brighter than ever and works on most hard surfaces! Even spotted, stained and damaged glass can be restored to a "Forever Brilliant" Shine. Granite, Marble Natural Stone and synthetic Stone becomes more hygienic. Interior and Exterior surfaces will resist stains and be easily cleaned once sealed with the Diamond Seal Systems process. All these surfaces can be easily maintained with DSS products, even Stainless Steel and fixtures. Tile, Porcelain and Grout surfaces stay cleaner longer and or easier to maintain with DSS products. Toilet bowl and bathtub rings are a thing of the past! Just imagine... no more hard water spots! "Green Science"

Why does Diamond Seal Systems Work So Well?

Glass, stone metal and other architectural materials have microscopic pores in their surface structure. These pores are collection points for contaminants like water, dust, oil, salt, mildew, bacteria, lime and other minerals. Constant exposure to these contaminants will cause water spots, stains as well as corrodes and oxidizes the surfaces destroying the new, natural look of the material. Once these contaminants penetrate the surface pores, they are difficult to remove. When harmful chemicals are used to clean these surfaces, they open the surface pores inviting more contaminants and speeding the destruction process. Diamond Seal Systems products work with the natural structure and chemistry of a surface material, not against it. DSS formulations vary depending upon the surface being protected. For example, silica materials like glass, granite, tile and porcelain actually attract contaminants like a magnet because they contain an unbound oxygen molecule just looking for a contaminant to bond to. These materials require constant cleaning. The DSS process reduces maintenance by blocking the contaminants from making a chemical reaction with the surface. "Easy Clean Living".

Why DSS Products?

DSS products are not "new" products. Some have been used for years in sophisticated markets. The Smith-Emery Labs, Ford Labs, CRT Labs and Lasco Bath Ware have tested DSS products to ASTM standards. Diamond Seal Systems by MicroMED, the ultimate goal is to identify the most scientific and environmentally friendly solutions for sealing,

cleaning all kinds of surfaces. By formulating proprietary blends helps keep the cost down so the DSS can offer them in one simple product line to homeowners.

Service: Certified applicators will come to your home and sanitize and treat all you hard surfaces with the Diamond Seal Systems and products. We will train you and your staff on how easy it is to maintain you home with the Diamond Seal Elite Green products to keep you home Green and Clean. Diamond Seal Systems has created the first sustainable Green Cleaning System and has been around since 1996.

“Setting the bar with Green Science”.

Points:

Better Indoor Air Quality through Advanced Technology

No harsh cleaners or chemicals needed for cleaning.

Much easier to maintain!

Surfaces always look great!

Surfaces become hygienic!

Saves you time and money!

A Healthy home through GREEN living.

Diamond Seal Systems products by Micro MED are the Answer.

How does DSS Work?

DSS fills in microscopic crevices of glass and glass like surface with a permanent hydrophobic and anti-static coating that repels water, dust and other contaminants.

DSS creates a covalent bond that becomes Super Hydrophobic and long- lasting. DSS stain resistant and corrosion protection resist water and other contamination that would other wise damage the surface. Bacteria, Mold and fungus cannot spread keeping the surface more Hygienic and easy to clean.

Cleaning with DSS Microfiber Cloth and the Diamond Blue Repellant Wash restores the original finish for life.

You Get ALL This as a Elite GREEN Home Client

As an Elite GREEN Home Owner, you will receive service from professionals trained to:

- Respect your time
- Respect your home
- Apply DSS Products Effectively
- Guide you or your home maintenance staff on Maintenance Techniques
- Ensure you are 100% Satisfied

For more information please call **877-234-9452** **www.diamondsealsystems.com**
